Field Direction Definition

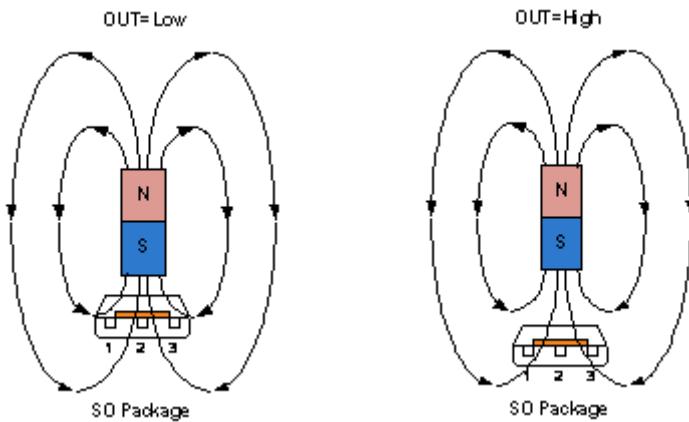

A positive magnetic field is defined as a south pole near the marked side of the package.

If the device is powered on with a magnetic field strength between B_{RP} and B_{OP} , then the device output is determinate High. For UA package, if the field strength is greater than B_{OP} , then the output is pulled low. If the field strength is less than B_{RP} , the output is released. For SO package, however, if the field strength is less than B_{OP} , then the output is pulled low. If the field strength is greater than B_{RP} , the output is released.
